

How it works?

1. **Enter** text and formulas into the **"Code"** box on the left.
2. Press **F5** or click  to **calculate**. The results will appear in the **"Output"** box on the right as a professionally formatted **Html report**.
3. Click  to **print** or  to **copy** the output.

You can also **export** it to **Html** , **PDF**  or **MS Word**  document.

- Program flow control:

Simple:

```
#if condition
    your code goes here
#end if
```

Alternative:

```
#if condition
    your code goes here
#else
    some other code
#end if
```

Complete:

```
#if condition1
    your code goes here
#else if condition2
    your code goes here
#else
    some other code
#end if
```

You can add as many "**#else if**"s as needed, but only one "**#else**". You can omit any of them.

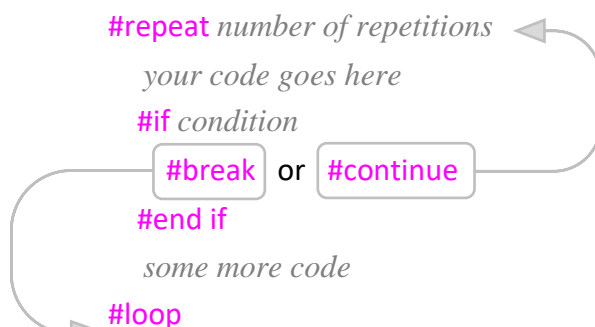

- Iteration blocks:

Simple:

```
#repeat number of repetitions
    your code goes here
#loop
```

With conditional break/continue:

```
#repeat number of repetitions
    your code goes here
    #if condition
        #break or #continue
    #end if
    some more code
#loop
```

```

```
content line 2
```

```
...
```

```
#end def
```

Inline string macro:

```
#def macro_name$(param1$; param2$; ...) = content
```

Multiline string macro:

```
#def macro_name$(param1$; param2$; ...)
```

```
content line 1
```

```
content line 2
```

```
...
```

```
#end def
```

#equ - show complete equations and results (default);

#noc - show only equations without results (no calculations);

#round *n* - rounds the output to *n* digits after the decimal point.

Each of the above commands is effective after the current line until the end of the report or another command that overwrites it.
